KINGSMEN™

KINGSMEN

From the Forest to your Front Step

Lumberjacks are people who fell trees, cut these into logs, and transport the logs to the sawmills. We are Kingsmen, who start with the process of the lumberjacks, but we don't stop at the mills. We bring the finished timber to your doorstep and install and maintain it for you as well. Our parent company in Myanmar & Indonesia, has been in the business for over a decade. We manufacture and bring to you the latest Solid Timber Flooring, Decking, Doors, Engineered Doors & Door Frames using latest state-of-the-art technology.

Manufacturing Facility

Our manufacturing facilities use sophisticated state-of-the-art facility using German, Japanese and Austrian machines.

Kingsmen's *Exceptional Quality and Expertise* ensures a full control over sourcing, manufacturing, installation and maintenance, thus ensuring zero compromise on the *highest quality standards*.

A WIDE VARIETY OF
TIMBER SPECIES

SIEANA WALNUT

IROKO

TIN WIN

BURMA TEAK

MERBAU

BRAZILIAN CHERRY

IRON WOOD

MAPLE

SAPELI

WHITE OAK

WENGE

IPE

SOLID TIMBER FLOORING

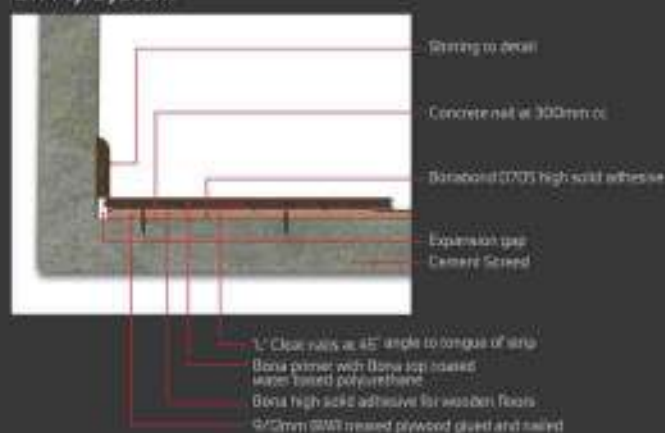

Solid Timber flooring is made of planks milled from premium grade timber logs that are kiln dried which guarantees performance of a lifetime. Manufactured under tight quality control conditions using the best manufacturing practices, our Solid Timber flooring comes with less carbon emissions. The flooring is made of *Superior Quality Hardwood* sourced from various exotic European, American, African and Asian timber species that are certified from ecological

managed forests. The flooring comes in eco-friendly finishes and is maintained using *Bona products*.

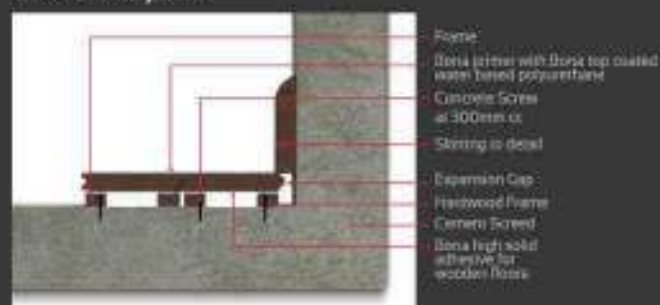

The flooring has a thicker wear surface and can be sanded and refinished multiple times. Our flooring is equipped with *absorption strips* that *reduce cupping*, and we use the *Ventilated Batten System* (Patented) for installation that makes the flooring less prone to gapping, loosening and deforming caused by humidity.

THE ART OF INSTALLATION

In addition to the timber, the components used for the installation of flooring play a **crucial role** in the durability of wooden floors. Whether it is the **adhesives** we use to stick the floor, or the **machines** and **abrasives** we use for sanding the floor, or the **filters** and **finishes** we use for polishing the floor, all play a very critical aspect in delivering the **best floor for you**. All the components we use are **Green Guard Certified** products from the world leader **Bona AB** which ensures your **Indoor Air Quality**.

Bona
Professional Floor Care

Kingsmen is an authorised user of Bona products.

SOLID TIMBER DECKING

Kingsmen uses *proprietary technology* for installation. We use *aerospace grade brackets, stainless steel screws*, and the patented *BLACKTRONZ™ clip system* to prevent typical pain points of outdoor decks.

Kingsmen offers beautiful decking options from exotic species of timber, namely Burma Teak, Iron Wood, Merbau, Belian and IPE.

Deck System

SOLID TIMBER DOORS

These doors are perfectly suited for natural indoor environments, with *lesser carbon emissions*. The seasoned doors are made from *kiln dried premium grade solid timber*, which provides *stability* and *durability*, along with a *superior surface finish*. The doors are site-finished and come with a warranty to *last you a lifetime*.

We offer a wide selection of *fascinating wood species*, with different styles and colours, ranging from the pronounced grains of *Burma Teak* and the warm tones of *Ash Wood*, to the exotic bold looks of *Honne (Merbau)* & *Iroko*, which suits your lifestyle.

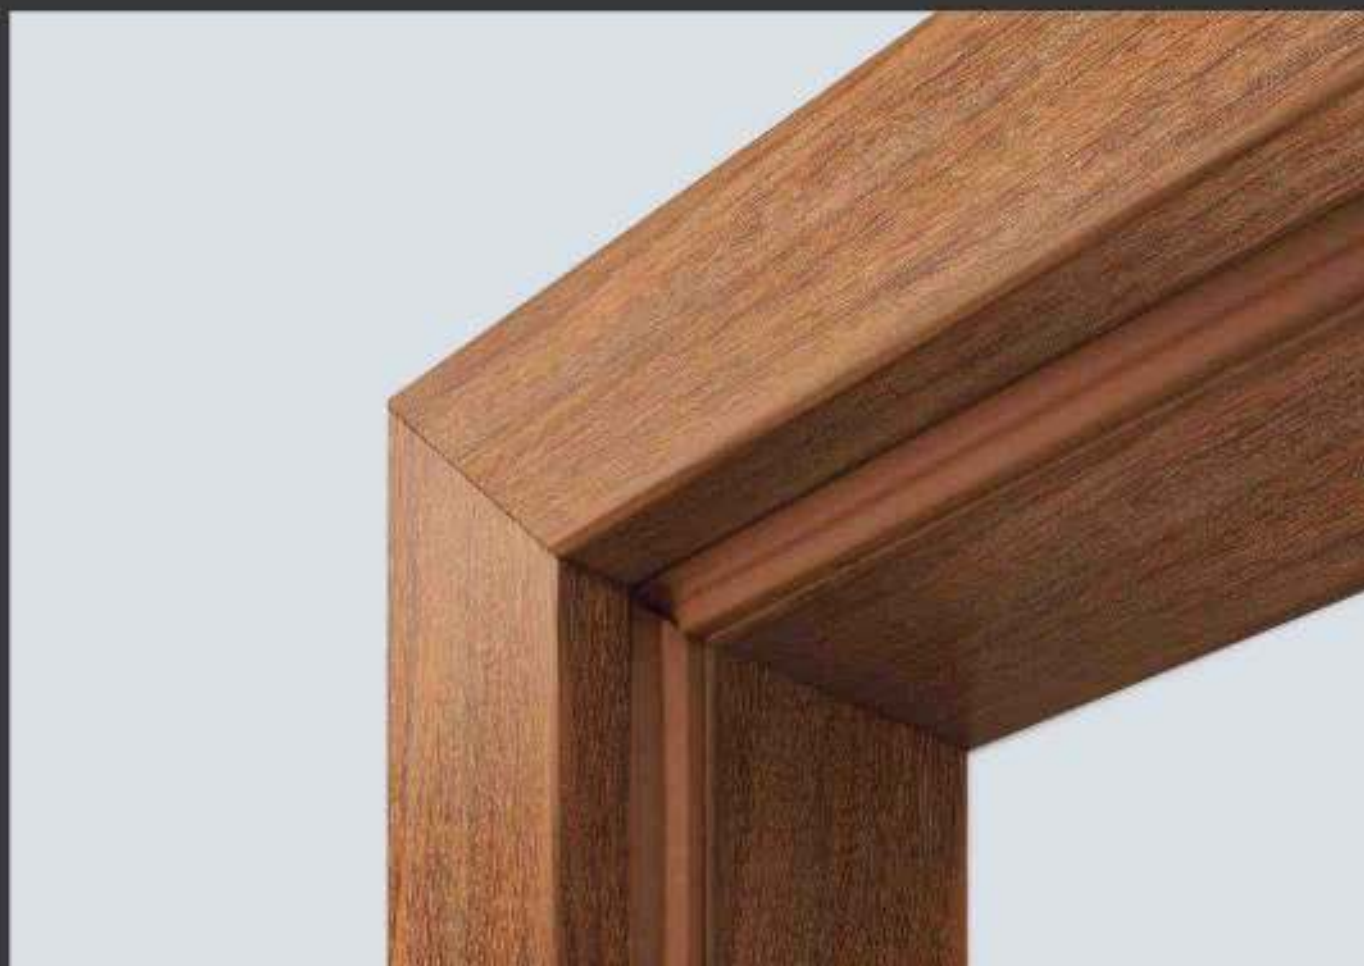

SOLID ENGINEERED DOOR FRAMES

Premium Grade Engineered Door Frames offer the aesthetics of wood through their natural warmth and multiple surface textures. The different thickness, size and exposure durability classifications make these products *stable* and *structurally strong*.

Our Engineered Wood Products are made from timber that is created specifically to *meet the preservation standards defined for India*; chemically treated by CCA as per IS:10013, and vacuum pressured as per IS:401.

Kingsmen understands that for every customer, strength and durability are the prime concerns.

To address this, the Engineered Doors and Frames use the *Finger Joint System* that makes the door stronger and prevents warping. We also use *Dowel Joints* that add to the strength and resist being pulled apart.
